OBJECTIVE

Trilingual (English, French, Spanish) CS student at McGill focused on detection engineering, adversary emulation, and threat intelligence. U.S. citizen, CompTIA Security+ and Network+ certified, eligible to obtain a Secret clearance. Seeking a Summer 2027 cybersecurity internship in detection, SOC, or threat intelligence.

EDUCATION

Bachelor of Arts, Computer Science Expected December 2027
McGill University *Montreal, QC*
Relevant Coursework Computer Systems, Software Systems, Algorithms & Data Structures, Discrete Structures, Programming Languages & Paradigms

CERTIFICATIONS

CompTIA Security+ Certified July 2026
CompTIA Network+ Certified October 2026
TryHackMe, Cyber Security 101 (Hands-on CTF, SIEM, Wireshark, Nessus fundamentals) Completed

SKILLS

Cybersecurity	Detection Engineering, Adversary Emulation, MITRE ATT&CK (+ Navigator), Sigma Detection Rules, Threat Intelligence, SIEM / SOC Tooling, KQL, Sysmon, Atomic Red Team
Networking	TCP/IP, OSI Model, DNS, Network Configuration, Access Controls
Systems	Windows, Linux (Ubuntu), macOS, Virtualization (VirtualBox)
Scripting & Backend	Python, C, Bash, PowerShell, FastAPI, Git, pytest, GitHub Actions

PERSONAL PROJECTS

Sigil - Real-Time Sigma Detection Engine github.com/noah-fage/sigil

- Built a real-time detection engine that evaluates Sigma rules against live Windows Sysmon telemetry via a custom pySigma backend, correlating detections into scored ATT&CK-mapped chain alerts exported as ATT&CK Navigator layers
- Validated live against Atomic Red Team across all 6 covered ATT&CK techniques; scored on 34 labeled public attack samples and 14,235 events of activity, fixing 2 telemetry-format bugs (detection 5 to 21 of 34, false alarms 12 to 2); 47 tests run in CI

Sentinel - AI Log Anomaly Detector sentinel-anomaly.vercel.app

- Built a full-stack SOC analytics dashboard (FastAPI, React) that ingests server logs and flags intrusion patterns, privilege escalation, and data exfiltration with cited evidence and 0-100 risk scoring, then forecasts an attacker's likely next moves; deployed on Render and Vercel

EXPERIENCE

Concordia University, Research Group of Prof. Carol Fung *Montreal, QC*
Student Security Researcher Sept 2026 - present

- Built a configurable attack-injection tool against an emulated IoT device (QEMU), running port-scan and SYN-flood attacks while capturing whole-device syscalls, CPU/memory, and network traffic to generate labeled training data
- Expanding the tool to additional attack types (brute force, buffer overflow) and target devices as part of a year-long IoT security dataset effort

McGill Science Computer Taskforce *Montreal, QC*
IT Consultant Feb 2025 - Jan 2026

- Administered and maintained a self-hosted Linux server fleet and internal networking infrastructure, managing network configuration, user access controls, and service uptime for systems supporting 100-200 students weekly

McGill Robotics, Rover Software Division *Montreal, QC*
Software Member Jan 2026 - present

- Selected to lead the UI subsystem, overseeing contributors and leading onboarding for new members
- Re-architected the rover's live camera streaming from TCP WebSocket to a GStreamer WebRTC/UDP pipeline for low-latency teleoperation, then traced a 6-issue failure chain through systematic root-cause debugging to deliver stable, competition-ready live video
