OBJECTIVE

Trilingual CS student at McGill focused on detection engineering, adversary emulation, and threat intelligence. U.S. citizen, CompTIA Security+ certified, eligible to obtain a Secret clearance. Seeking a Summer 2027 cybersecurity internship in detection, SOC, or threat intelligence.

EDUCATION

Bachelor of Arts, Computer Science

Expected December 2027

McGill University

Montreal, QC

Minor in Music Technology

Relevant Coursework Introduction to Computer Systems, Intro to Software Systems, Algorithms & Data Structures, Discrete Structures

CERTIFICATIONS

CompTIA Security+

Certified July 2026

TryHackMe, Cyber Security 101 (Hands-on CTF, SIEM, Wireshark, Nessus fundamentals)

Completed

CompTIA Network+

Expected September 2026

SKILLS

Cybersecurity

Detection Engineering, Adversary Emulation, MITRE ATT&CK (+ Navigator), Sigma Detection Rules, Threat Intelligence, SIEM / SOC Tooling, Sysmon, Atomic Red Team

Networking

TCP/IP, OSI Model, DNS, Network Configuration, Access Controls

Systems

Windows, Linux (Ubuntu), macOS, Virtualization (VirtualBox), Microsoft 365

Scripting & Backend

Python, C, Bash, PowerShell, FastAPI, Git, pytest, GitHub Actions

Languages

English, French, Spanish (trilingual)

PERSONAL PROJECTS

sigil - Real-Time Sigma Detection Engine

github.com/noah-fage/sigil

- Built a real-time detection engine that evaluates Sigma rules against live Windows Sysmon telemetry via a custom pySigma backend, correlating detections into scored chain alerts mapped to MITRE ATT&CK and exported as ATT&CK Navigator layers
- Validated live against Atomic Red Team across 4 of the 6 covered ATT&CK techniques (LOLBin abuse, LSASS credential dumping, process injection, registry persistence) in an isolated lab VM; found and fixed a real detection bug during testing; 34 unit and replay tests run in CI

Sentinel - AI Log Anomaly Detector

sentinel-anomaly.vercel.app

- Built a full-stack SOC analytics dashboard (FastAPI, React) that ingests server logs and flags intrusion patterns, privilege escalation, and data exfiltration with cited evidence and 0-100 risk scoring
- Extended the pipeline with a second model to forecast an attacker's 3 most likely next moves with confidence percentages and recommended countermeasures; deployed on Render and Vercel

EXPERIENCE

McGill Science Computer Taskforce

Montreal, QC

IT Consultant

Feb 2025 - Jan 2026

- Administered and maintained a self-hosted Linux server fleet and internal networking infrastructure, managing network configuration, user access controls, and service uptime for systems supporting 100-200 students weekly
- Performed hands-on hardware diagnostics, component-level troubleshooting, and system imaging to keep equipment operational for hundreds of CS students weekly

McGill Robotics, Rover Software Division

Montreal, QC

Software Member

Jan 2026 - present

- Re-architected the rover's live camera streaming from TCP WebSocket to a GStreamer WebRTC/UDP pipeline for low-latency, loss-tolerant teleoperation, then diagnosed and fixed a 6-issue failure chain across GStreamer caps/encoder configuration, UDP port binding, and frontend playback race conditions to reach stable live video
